Trash Chutes

For Rubbish Removal

- **Can be set up - or taken down - in minutes**
- **No more dust or danger of flying debris**
- **Made of tough, high-density polyethylene**
- **Weatherproof - no corrosion or rust**
- **Reusable - saves money on every job**

Ideal for roofers, job site clean-up or demolition work. Trash goes directly into truck, without dust or danger of flying debris. Replaces "one-use" plywood, "barrel chutes" and other narrow diameter systems. Can be used on buildings from 1 to 10 stories high.

Trash chutes can be set up in minutes. Each tapered section telescopes into any other section, and is fitted with support chains. Just hook section chains to the section above, hoist to roof level and secure outrigger supports. Each section weighs less than 25 lbs.

Sections can be taken down just as easily, are easy to clean and are completely portable. They can be stored in round shape for the next quick set-up. For longer periods of time, or to save storage space, store them flat. Re-assembly is easy, either way.

Trash Chute Specifications

Each section comes in 30" diameter, and in 4' lengths for easy handling. Vertical overlap closure and chain plate fittings are riveted to sections and support chains are firmly attached. Collection Hoppers are in-stock and available. Hoppers are 37" square by 18" diameter.
